

AQUAWATT 2025: Europe's Key Hydropower Event Returns to Piacenza

On the heels of its successful first edition, AQUAWATT—the leading exhibition and conference for water management for energy purposes—returns to Piacenza Expo from October 29th to 30th, 2025.

After a strong inaugural edition in 2024, AQUAWATT has quickly established itself as a key European event for professionals in the hydropower sector. It offers a unique opportunity to explore the latest developments, challenges, and opportunities in water-based energy production.

A qualified technical committee—composed of industry experts and professionals—is already at work to define a high-level program of conferences and workshops, designed to attract business visitors from across Europe. Participants will have the opportunity to delve into crucial topics such as the **European energy policy**, the concept of **water as a “common good”**, and current technical themes such as **repowering of existing plants, pumped-storage stations**, and innovative **control and management technologies**.

AQUAWATT will also serve as a top-tier showcase for exhibiting companies, who will be presenting cutting-edge technologies and services in the hydropower sector, creating a dynamic hub for business exchange between supply and demand.

A project aimed at bringing together all stakeholders involved industrial, energy, and environmental management of water—at a time when achieving energy self-sufficiency stands as one of the greatest global challenges.

AQUAWATT is organized by Piacenza Expo with the patronage of ETIP HYDROPOWER, ITCOLD, ANBI, AIPND, FEDERIDROELETTRICA, ENEA, RSE, and ANIPA.
